### DETAILED ACTION

\*\*\* This office action is in response to Applicant's Amendment filed on December 16, 2003. Claims 12-21 are currently pending. Claims 1-11 and 22 were canceled.

#### *Allowable Subject Matter*

1. Claims 12-21 are allowed.
2. The following is a statement of reasons for the indication of allowable subject matter:  
Applicant's amendment and convincing remarks of record have overcome the rejections in the last office action. The references of record, alone or in combination, do not fairly anticipatively disclose each and every aspect of the claimed asymmetric field effect transistor, or fairly make a prima facie obvious case of the claimed transistor, in combination with other claimed limitations as recited in claim 12, the inclusion of including impurities supplied thereto adjacent edges of a trench in a dielectric layer on a semiconductor layer formed on an insulator layer, wherein the impurities have locations precisely defined by respective edges of the trench and independently tailored concentrations to produce asymmetrical diode properties at the source and drain regions for reducing floating body effects without an additional connection between said semiconductor layer between the source and drain regions and the source region of the asymmetric field effect transistor.

In Long et al (6,525,381) and Nowak et al (6,528,846), the impurities are differently introduced into a semiconductor layer in self-alignment with the sidewall edges of a gate structure so that the outward locations of the impurities do not precisely defined by respective edges of the trench and independently tailored concentrations to produce asymmetrical diode properties at the source and drain regions for reducing floating body effects without an additional connection between said semiconductor layer between the source and drain regions and the source region of the asymmetric field effect transistor.
